

The Oil Age is Over

**What to Expect as the World Runs
Out of Cheap Oil, 2005-2050**

Matt Savinar, JD

Acknowledgments

This book would not have been possible without the research, writing, bravery, honesty and patience of the following individuals (In no particular order):

Michael C. Ruppert: Editor-in-Chief of *From the Wilderness Publications* (FTW) and author of *Crossing the Rubicon: The Decline of the American Empire at the End of the Age of Oil*.

Dale Allen Pfeiffer: Energy Editor of *From the Wilderness Publications* and author of *The End of the Oil Age*.

Richard Heinberg: author of *The Party's Over: Oil, War, and the Fate of Industrial Civilizations* and *Plan Powerdown: Options and Actions for a Post-Carbon World*.

Julian Darley: author of *High Noon for Natural Gas* and co-founder of *The Post Carbon Institute*.

Dr. Colin J. Campbell: author of *The Coming Oil Crisis* and founder of the Association for the Study of Peak Oil and Gas.

Matthew Simmons: energy investment banker, Simmons and Company and author of numerous white papers on the energy crisis.

Jay Hanson: creator of the Peak Oil and population crash website, <http://www.dieoff.org>

Dr. Marion King Hubbert (Deceased): for whom the “Hubbert’s Peak” is named.

Bob and Anna Savinar: my parents. I wrote the first draft of this book and built my website, <http://www.lifeaftertheoilcrash.net>, on their computer while living at home. Without their patience neither project would have been completed.

Table of Contents

Part I.	Introduction	1
Part II.	Peak Oil and the Ramifications for Industrial Civilization	5
1.	I heard we have about 40 years left. What's there to worry about?	6
2.	When will Peak Oil occur?	7
3.	Big deal. If gas prices get high, I'll just carpool or get one of those hybrid cars. Why should I be concerned? .	9
4.	What do you mean by "die-off"?	11
5.	Are you serious? That's 90 percent of our current population. How could that many people perish? Where does that number come from?	11
6.	I still can't imagine that number of deaths. It's just too ghastly to imagine. Only 10 percent of us are going to make it? How can that possibly be?	15
7.	Is it possible that it may now be too late to stop the die-off?	16
8.	Not to be insensitive, but I'm sure that most of those deaths will take place in the third world. The US will likely have the bulk of the survivors, right?	17
9.	Clearly, we have a problem, but I'm sure that most of those deaths will take place in the third world. The US will likely have the bulk of the survivors, right?	18
10.	What do Dick Cheney and George W. Bush have to say about this?	18
11.	Is it possible we have already hit Peak Oil and are now in the first stages of the crash?	20
12.	This is going to be a slow, gradual decline, right?	26

13.	What about the oil in the Arctic National Wildlife Preserve (ANWR)? Can't we drill there?	27
14.	What about the oil under the Caspian Sea?	27
15.	What about so-called "non-conventional" sources of oil?	27
16.	I just read an article that says known oil reserves keep growing.	28
17.	Is it possible there is still more oil left to be discovered?	31
18.	What if there is actually a huge amount of oil just waiting to be discovered that we somehow missed? Wouldn't that make a difference?	32
19.	But I just heard on the news that they made a huge oil discovery somewhere?	32
20.	Is it possible that things might get better before they get worse?	33
21.	Can't technology just find better, more efficient ways to use the oil that is left?	33
22.	I heard that some scientist has a theory that fossil fuels actually renew themselves and that oil fields are refilling. Is there any truth to that, and if so, will it make any difference in our situation?	34
23.	How is the oil industry reacting to this?	35
24.	People have been saying we'd run out of oil since as long as I could remember. In fact, didn't the Club of Rome make this exact same prediction back in the 1970s?	37
25.	We had oil problems back in the 1970s. How is this any different?	38
26.	The end of the world is here, once again. So what's new? Y2K was supposed to be the end of the world and it turned out to be much ado about nothing.	39

27.	When you say Peak Oil is going to knock us back to the Stone Age, you're exaggerating to make a point, right?	39
28.	Some expert on the news just explained the recent rise in oil and gas prices is due to terrorism in Saudi Arabia or the crisis in Russia, and concerns about "running out" are unfounded.	40
29.	Can't the Saudis raise their production and help stave off a crisis?	41
30.	How does all this tie in with Global Climate Change?	43
31.	How does this all tie in with the water crisis I've been hearing about?	44
Part III	Alternatives to Oil: Fuels of the Future or Cruel Hoaxes?	45
32.	What about alternatives to oil? Can't we just switch to different sources of energy?	46
33.	Can't we use coal to replace oil?	49
34.	What about substituting natural gas for coal?	50
35.	What about using methane hydrates from the ocean - floor as fuel?	50
36.	What about using geothermal energy?	51
37.	What about hydrogen? Everybody talks about it so much, it must be good, right?	51
38.	What about nuclear power?	53
39.	What about solar power?	54
40.	What about water/hydro electric power?	57
41.	What about wind power?	57
42.	What about plant based fuels like methanol and ethanol?	58

43.	What about biodiesel?	59
44.	What about hemp?	60
45.	What about this new technology that can turn waste into oil?	61
46.	What about free energy? Didn't Nikola Tesla invent some machine that produced free energy?	62
47.	What about using a variety of alternatives? If we used a little of this and a little of that, can't it add up?	63
48.	Are these alternatives useless then?	64
49.	I know the physics and math of renewable energy don't add up, but what if some miracle alternative or combination of alternatives comes online and replaces 90% of the energy we lose as a result of Peak Oil? Wouldn't that prevent a collapse?	65
50.	Fine, but what if space aliens or angels come down and give us an alternative source of energy that easily replaces oil and can supply a constantly increasing amount of energy? Wouldn't that prevent a collapse?	70
Part IV.	Issues of Economy, Technology, and the Ability to Adapt.	71
51.	I don't think there is really anything to worry about. According to classical economics, when one resource becomes scarce, people get motivated to invest in a replacement resource. When the price of oil gets too high, renewable energy will become profitable and companies will begin investing in it.	72
52.	What about the whale oil crisis of the 19 th century? The market solved that crisis. What makes you think it won't solve this one?	75
53.	The oil companies will come up with a solution to keep making money, right?	76

54.	Is it possible the oil companies are sitting on some technology that they're going to bring to the market? Or maybe the government is hiding some technology that can replace oil?	77
55.	I think you are underestimating the human spirit. Humanity always adapts to challenges. We will just adapt to this too.	78
56.	We'll think of something. We always do. Necessity is the mother of invention.	79
57.	People survived for thousands of years without oil. There is no reason we can't survive without it.	80
58.	What if everybody went out and bought a hybrid car? Would that help the situation?	80
59.	You're underestimating us. Look at the odds we overcame in World War II. We figured out a way to defeat Hitler; we can figure out a way to deal with Peak Oil.	81
60.	If we stopped spending so much money bombing other countries and put that money towards peaceful pursuits like building schools and hospitals, wouldn't that help the situation?	82
61.	So how do our leaders plan on overhauling the international banking system?	83
62.	Can't we conserve energy to buy ourselves extra time?	83
Part V.	Peak Oil and US Political/Social Issues.	85
63.	John Kerry has a renewable energy plan. If he's elected president, will that help the situation?	86
64.	How long has the US government based its foreign policy on Peak Oil?	87
65.	Why haven't I heard about this on the nightly news? . . .	88

66.	How do I know Peak Oil isn't just a myth made up by the oil companies and other corporate interests to drive the price of oil up and keep me enslaved to a scarce resource?	90
67.	In light of the energy situation we are facing, why are our leaders spending money and cutting services like there is no tomorrow?	91
68.	Why are we going off to the Moon and then to Mars at a time when we should be dealing with these oil shortages?	92
69.	What about Bush's plane to give amnesty to the illegal immigrants from Mexico? Does that have anything to do with Peak Oil?	96
70.	Does Peak Oil have anything to do with the war on drugs?	96
71.	I'm a Baby Boomer. What can I expect in the years to come?	98
72.	I'm a member of Generation X or Y. How will Peak Oil effect me in particular?	100
73.	I own a Hummer. What can I expect in the years to come?	101
74.	I'm having trouble believing a country as powerful as the United States is on the verge of collapse.	102
75.	Is it possible the government is actually trying to speed up the collapse?	102
Part VI.	Peak Oil and America's March Towards a Fascist-Feudal State.....	105
76.	Does Peak Oil have anything to do with September 11 th ?	106
77.	Does Peak Oil have anything to do with legislation such as the Patriot Act?	115

78.	Gosh, don't you think you're making a big deal out of nothing? This is just unnecessary alarmism.	117
79.	Would this explain why our military and police forces have been investing so much in "crowd control" and "non-lethal" technology?	123
80.	If he's elected president, will John Kerry's foreign and domestic policies be much different than George W. Bushes?	123
Part VII.	Peak Oil and Global War.	127
81.	What is the government doing to solve this problem? .	128
82.	So the war in Iraq was about oil? Was Saddam the true target?	132
83.	Iraq, Afghanistan . . . who else is on the hit list?	134
84.	Is the US going to invade Iran?	134
85.	Is the US going to invade Saudi Arabia?	135
86.	Is the US going to invade Venezuela?	135
87.	Is the US going to invade West Africa?	137
88.	Is the US going to invade Canada?	137
89.	Is the US going to invade France?	138
90.	What's going to happen when recently industrialized China decides it needs what little cheap oil is left as bad as the US does?	138
91.	Well, at least we don't have to worry about Russia anymore. After 9/11, they said they would support us. They're our friends now, right?	142
92.	Is it possible that China and Russia might get together and gang up on the US?	142
93.	You forgot about North Korea.	143
94.	Gosh, this sounds worse than World War II.	143

95.	Isn't this going to require a reinstatement of the draft? . . .	144
96.	Is the US capable of winning these wars?	145
97.	Are we really crazy enough to fight an all out nuclear war for oil?	146
98.	Is there any chance we will resolve this situation without an all-out world war?	146
99.	I think I'm going to be sick.	148
100.	Gosh, this sounds like some type of Mad-Max scenario.	148
Part VIII. Managing the Crash & Coping with the Ramifications		149
101.	I'm by nature an optimist. This all sounds so pessimistic.	150
102.	It sounds like this is a serious problem, but you know, I could get cancer or be run over by a car or any number of other catastrophes. Why should I worry about this, too?	150
103.	I have work, school, bills, kids, traffic, etc., to deal with. How am I supposed to prepare for the oil crash when I'm barely keeping up with life as is?	150
104.	Should I be getting a gun and hiding in the woods? . . .	151
105.	Do you think people will wake up in time to avert or at least soften the crash?	151
106.	What should governments be doing to address these problems?	153
107.	What are some steps that I can personally take in the next few days to begin addressing this situation?	154
108.	Would it be a good time to look into buying a solar-powered home, if I have the financial resources to do so?	156

109.	How am I supposed to help stop the military-industrial complex that seems to have taken over the world?	156
110.	How am I supposed to maintain a positive mental attitude now that I know industrial civilization is about to collapse? How should I prepare emotionally?	157
111.	I tried to tell my relatives about this, but they refused to listen. How can I get them to take this issue seriously?	159
112.	Why do you think this is happening? What do you think the “big picture” is?	159
113.	One last question: As things begin to collapse, do you think society will finally make good on Shakespeare’s admonition to, “kill all the lawyers”?	160
